common nails spaced a maximum of 6" in the field or has a mean uplift resistance of at least 182 psf.
D. Reinforced Concrete Roof Deck  E. Other:
F. Unknown or unidentified.
G. No attic access.
<b>4.)</b> Roof to wall Attachment: What is the WEAKEST roof to wall connection? (Do not include attachement of hip/valley jacks within 5 feet of the inside or outside corner of the roof in determination of the WEAKEST type).
A. Toe Nails
<ul> <li>Truss/Rafter anchored to top plate of wall using nails driven at an angle through the truss/rafter and attached to the top plate of the wall or</li> <li>Metal connectors that do not meet the minimal conditions or requirements of B, C or D.</li> </ul>
Minimal conditions to qualify for categories B. C or D. All visible metal connectors are:
<ul> <li>☑ Secured to truss/rafter with a minimum of three (3) nails and</li> <li>☑ Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a 1/2" gap from the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visual severe corrosion.</li> <li>☑ B. Clips</li> </ul>
<ul> <li>         ☐ Metal connectors that do not wrap over the top of the truss/rafter, or         ☐ Metal connectors with a minimum of 1 strap that wraps over the top of the truss/rafter and does not meet the nail position requirements of C or D, but is secured with a minimum of 3 nails.     </li> <li>         C. Single Wraps     </li> </ul>
Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum Of 2 nails on the front side and a minimum of 1 nail on the opposing side.  D. Double Wraps
<ul> <li>☐ Metal connectors consisting of 2 separate straps that are attached rto the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side, and a minimum of 1 nail on the opposite side, or</li> <li>☐ Metal connectors consisting of a single strap that wraps ob=ver the top of the truss/rafter, is secured to the wall on both sides, and is secured to the top plate with a minimum of three nails on each side.</li> </ul>
E. Structural Anchor bolts structurally connected or reinforced concrete roof.
F. Other:
G. Unknown or Unidentified
H. Not attic access
<b>5.)</b> Roof Geometry: What is the roof shape(s)? (Do no consider roofs of porches or carports that are attached only to the fascia or wall of the host structure over unenclosed space in the determination of the roof perimeter or roof area for roof geometry classification.)
A. Hip Roof Hip roof with no other roof shapes greater than 10% of the total roof system perimeter.  Total length of non-hip feature: Feet; Total roof system perimeter: feet.
B. Flat Roof Roof on a building with 5 or more units where at least 90% of the main roof area has a roof slope of less than 2:12. Roof area with slope less than 2:12 sq. feet; Total roof area sq. feet.
C. Other Roof Any roof that does not qualify as either (A) or (B) above
<b>6.) Secondary Water Resistance (SWR):</b> (Standard underlayments or hot-mopped felts do not qualify as a SWR)
A. SWR (Also called Sealed Roof Deck) Self-adhering polymer modified-bitumen roofing underlayment applied directly to the sheathing or foam adhesive SWR barrier (not foamed-on insulation) applied as a supplemental means to protect the dwelling from water intrusion in the event of roof covering loss.
B. No SWR.
C. Unknown or unidentified.
Inspectors Initials: Property Address 201-204 Del Sol Circle, Tequesta, Florida 33469

5.)

\*This verification form is valid up to five(5) years provided no material changes have been made to the structure or inaccuracies found on this form. OIR-B1-1802 (Rev. 1/12) Adopted by Rule 690-170.0155  $page\ 2\ of\ 4$ 

7.) Opening Protection: What is the weakest form of wind borne debris protection installed on the structure? First, use the table to determine the weakest form of protection for each category of opening. Second, (a) check one answer below (A, B, C N or X) based upon the lowest protection level for ALL Glazed openings and (b) check the protection level for all Non-Glazed openings (.1, .2, .3) as applicable.

Opening Protection Level Chart Place an "X" in each row to identify all forms of protection in use for each		Glazed Openings			Non-Glazed Openings		
openi form	ing type. Check only one answer below (A thru X), based on the weakest of protection (lowest row) for any of the Glazed openings and indicate leakest form of protection (lowest row) for Non-Glazed openings.	Windows or Entry Doors	Garage Doors	Skylights	Glass Block	Entry Doors	Garage Doors
N/A	Not Applicable- there are no openings of this type on the structure		Χ	Χ	Χ		
Α	Verified cyclic pressure & large missile (9-lb for windows doors/4.5 lb for skylights)	Χ				Χ	Χ
В	Verified cyclic pressure & large missile (4-8 lb for windows doors/2 lb for skylights)						
С	Verified plywood/OSB meeting Table 1609.1.2 of the FBC 2007						
D	Verified Non-Glazed Entry or Garage doors indicating compliance with ASTM E 330, ANSI/DASMA 108, or PA/TAS 202 for wind pressure resistance						
N	Opening Protection products that appear to be A or B but are not verified						
IV	Other protective coverings that cannot be identified as A, B, or C						
Х	No Windborne Debris Protection						

X	A.	Exterior Openings Cyclic Pressure and 9 lb Large Missile (4.5 lb for skylights only) All glazed openings are protected at a minimum,
		with impact resistant coverings or products listed as wind borne debris protection devices in the product approval system of the State of
		Florida or Miami-Dade County and meet the requirements of one of the following for "Cyclic Pressure and Large Missile Impact" (Level A
		In the table above).

- \* Miami-Dade County PA 201,202 and 203.
- \* Florida Building Code Testing Application Standard (TAS) 201, 202 and 203
- \* American Society for Testing and Materials (ASTM) E 1886 and ASTM E 1996.

Re: Tile Roof on 201 Del Sol Circle, Tequesta, Florida 33469

To whom it may concern

The latest <u>Uniform Mitigation Form OIR-B1-1802 (2/10)</u> no longer allows for the inspector to select an option that refers to tile roofs installed to the FBC standards. This is because Questions 2 (Option A) on this form refers only to the testing requirements for Shingle Roofs and Metal Roofs. No other roof types are allowed.

Therefore, this letter serves to confirm that the tile roof on the inspection residence, based upon the confirmation permit application date or the build date of the home, was installed in accordance with the 2001 FBC for tile roofs. However as a tile roof cannot meet Option A, inspectors are obligated to select Option B: (Does not meet the above minimum requirements) for Question 2.

Please feel free to contact me with any questions.

Crawy R. St.
